

Full Paper Submission Instructions for ICoRD'27

- Easychair tool will be opened for full paper submission from 15 March **2026** and the deadline to submit full paper(s) is **01 May 2026**
- Kindly consider the comments given on your abstract while writing the full paper.
- In the existing Easychair account
 - Kindly review the author's information.
 - The paper should be formatted in the template provided (Word template/ LaTeX template) and should be within 10 pages. Templates and detailed author guidelines about the Springer template can be found in the Conference tool. (Submission->View-> Add File-> submission templates).
 - Each paper should be of **at least 8 pages, and at most 12 pages** in length in the above format.
 - Maximum page limit **without paying additional page charges (including abstract and references) is 10** formatted pages. **With page charges, the page limit is 12** formatted pages.
 - A flat charge for extra pages (up to 2 pages) is as follows
 - >1. 50 USD for international authors
 - > 2. 1500 INR for Indian & SAARC authors
 - Submit your paper in PDF format only (Submission->View-> Add File).
 - Kindly do not include author details in your full paper, as the papers are planned to be blind-reviewed. Please leave the author details section blank (i.e. 'as is' in the paper template).
 - Before submitting your paper, kindly agree to the declaration checkbox. (Submission->View->Update information)
 - Before submitting your paper, kindly declare conflict of interest if there are any. (Submission->View->Declare conflict)
- All papers will go through a double-blind review process and reviews will be available by **15th July 2026**.
- The paper should describe original research (i.e., not published elsewhere), and must be written in English. Major plagiarism issues (including self-plagiarism) will lead to desk rejection of the submitted paper.
- For each accepted paper, at least one author must register by paying the full registration fee and attend the conference in person to present the paper. Please note that ICoRD 2027 is intended to be conducted entirely in-person, without any option for online or hybrid mode.
- Some useful guidelines to prepare your manuscript can be found in 'How to Write a Paper' by Mike Ashby - <http://www-mech.eng.cam.ac.uk/mmd/ashby-paper-V6.pdf>

Minimum Eligibility for Consideration of a Full Paper for ICoRD

The following are minimally needed for a full manuscript to be considered for review for ICoRD:

1. Acceptance of the abstract for ICoRD is only an approval for submission of full paper. **It is not acceptance of the full paper.** The manuscript for the full paper will be separately reviewed by an international programme committee before a decision on its acceptability is taken.
2. Before submission of the full paper, it should be formatted in **Springer Nature format** (the format template will be shared after abstract acceptance).
3. Each paper should be of **at least 8 pages, and at most 12 pages** in length in the above format.
4. Maximum page limit **without paying additional page charges is 10** formatted pages.
5. **With page charges the page limit is 12** formatted pages.
6. Each manuscript needs to have the following included in the paper (although not necessarily in the order in which these are mentioned below or explicitly in so many sections):
 - a. **Objectives, Research Questions/Hypotheses:** What objectives did it fulfil, and/or what questions did it ask, and/or what hypotheses did it test (you need to have at least one of these addressed in your paper).
 - b. **Motivation, Background:** Why was the above objective, research questions or hypotheses addressed? What high level impact would the work have?
 - c. **Research Approach, Methodology:** How did you try to fulfil the objectives, answer the research questions, test your hypotheses? What steps did you take?
 - d. **Findings:** By following your research approach, what did you find? What were the results obtained? Did these address your objectives/questions/hypotheses?
 - e. **Summary and Conclusions:** Summary summarises what has been reported in the manuscript. Conclusions critique a, b, c and d above: How good were your answers? How good was the research methodology? Did/will these fulfil the motivations? What were the limitations? What aspects are still to be done?
 - f. **References:** You need to cite and critically review **at least 8 peer-reviewed work** from archival journals/conferences/books/reports in your manuscript and reference these in your list of references.
7. **ICoRD intends to publish original papers** that report on the development of **new knowledge of value** to the academia and practice. In the full manuscript, therefore, you need to **establish what is new that you report, and why this is important**. You need to establish novelty and importance by reviewing earlier work published. Hence **critical review of earlier literature in the area of the manuscript is essential** to be included in the manuscript.
8. A manuscript that includes **only ideas and opinions is not acceptable for ICoRD**.
9. Since academic value is of prime interest in ICoRD, **reporting on a commercial tool alone is not acceptable for ICoRD**. Furthermore, in all papers, commercialism should be avoided.
10. Typical papers in ICoRD report one or more of the following:
 - a. A study exploring the **nature of designs or designing, or how these are (currently) influenced** by aspects of people, product, process, organisation, knowledge, tools, economy and ecology. **These are ‘as is’ studies – how design works.**
 - b. A study exploring the **development and evaluation of support** (a guideline, tool, or any other recipe) for improving effectiveness or efficiency of designs and designing. **These are ‘as should be’ studies – how design should be improved.**

- c. A study on the development of a **novel design** that fulfils a clear and unmet need, often **demonstrating use of various design support** in this process of development.
- 11. All papers are expected to be original contribution to knowledge. **A plagiarism check** will be run by the publishers and any paper having more than 20% overlap will be automatically rejected.
- 12. **No paper should be generated using AI**, such as LLMs. The publishers will run an **AI check** and will reject any such papers with substantial overlap with content generated by AI.
- 13. If any support is taken by the authors from AI for developing any part of the content of their paper, this should be **clearly declared in the Acknowledgement section of the paper**, specifying the parts of the content that were so developed. The programme committee of ICoRD'27 reserves the right to reject the paper if it deems the extent of support inappropriate and compromises the originality of the content of the paper.
